Business Intelligence

A Ready-Made Data Warehouse for MS Dynamics 365 Business Central

precisionpoint

With MS Dynamics 365 Business Central you have invested in a market leading application to manage and control every aspect of your company's financials. You are now looking to unlock the wealth of data collected to deliver real business intelligence to your leadership team.

You need intelligence that shows trends in customer buying patterns, analysis on revenue vs costs and a detailed understanding of the operational performance of the business. All of the data points exist, it is just a case of how you make these accessible and consumable. To enable those who need it to be able to drill up, down and across the data to uncover not just what is happening, but why it is happening.

Addressing The Gaps & Simplifying The Complex

A fundamental feature of ERP systems is that once a transaction is posted and stamped into the appropriate ledger it is summarised and key details are stripped out. There is a need to retain this detail as it provides key data points for trend analysis and the ability to understand the cause of such trends.

Mining data in a transactional system can be complex. If you have multiple entities, multiple business units or operate in multiple currencies, being able to analyse information across these is not simple and often requires extraction of data into spreadsheets with all the inherent risks and inaccuracies of having multiple versions of the truth.

The solution is to utilise a data warehouse. The ability to retain the detail behind every financial transaction and to store this information in a way that simplifies analysis and the creation of actionable intelligence.

A Ready-Made Data Warehouse for Business Central

Building a data warehouse from scratch can be both a lengthy project and costly. You require expertise in data modelling and understand the inner workings of Dynamics 365 to ensure and maintain data integrity.

At PrecisionPoint we have already made this investment, so you don't need to. Our Dynamics 365 Business Central Data Warehouse is a full end-to-end BI and Analysis platform, built on the patented PrecisionPoint integration and intelligent ETL process, delivering a reconciled single data source across your business.

As experts in Business Intelligence for MS Dynamics 365 Business Central, we are able to unlock your data and make it intuitive to understand, therefore enabling you to quickly and easily deliver the actionable insights your leadership team requires.

Our solution provides proven market leading accuracy for trend analysis, forensic financial analysis and complex cross-ledger reporting that would otherwise be cost prohibitive to deliver.

> "PrecisionPoint was originally intended for the finance team to consolidate P&L data, but is now building our commercial KPIs and wide reaching business reports."

VP Operations Europe, ZyXEL

Immediate Business Intelligence

We enable you to immediately put in place a solution that delivers on the needs of your business delivering instant value that includes:

Data Confidence & Integrity

We enable you to maintain a single source of the truth that is fully reconciled and validated against Dynamics 365. This removes the inherent risk of exporting and manipulating information in multiple spreadsheets and tools.

Simplify The Complex

You may have multiple entities or do business across multiple currencies. We enable you to transpose this data in the way your business needs, simplifying the complex and enabling you to access the fully picture.

Push Critical Business Insights

We transform business reporting into a proactive automated dashboard system, allowing you to push your critical insights straight to your leadership team. Speeding up business efficiency, and enabling faster and more informed decision making.

Insights Not Just Data

PrecisionPoint enable you to see what is happening but more importantly, why it is happening with a powerful Data Warehouse that allows you to drill down on trends across every aspect of your business.

Business Intelligence as-a-Service

With PrecisionPoint you don't just get a software application, you get Business Intelligence as-a-Service. Access to our ready-made data warehouse which you consume on a monthly basis and also a managed service tailored to your specific needs.

Deployment takes a matter of days as opposed to months or years of a bespoke data warehouse project. We take care of everything, working alongside your internal IT team to establish your unique connectors into your instance of MS Dynamics 365 Business Central.

We help you to thoroughly validate your initial data load, performing cross-ledger reconciliation and checking every aspect of data integrity. And we provide comprehensive training to your team, enabling them to fully understand the provided data model, interrogate this data and provide them with hands-on experience of creating their own specific dashboards and reports.

On an ongoing basis we don't just monitor the availability of your system, but we continually validate data synchronisation, perform regular data journey audits and thorough reconciliation to ensure integrity, as well as providing you with all the support you need to maximise our solution.

Fully Compatible With NAV or AX

We do not just provide our Data Warehouse and Business Intelligence solutions for the latest Microsoft Dynamics 365 platforms, but we also support older versions of Dynamics Navision (NAV) and Axapta (AX) back to version 4.

We don't just enable you to unlock the data inside your NAV or AX system to provide actionable insights but provide a key tool to assist with any future migration to Dynamics 365 Business Central.

Our solution can capture your legacy data and consolidate with your new Dynamics solution, providing access to all of your business information without the need for migration within the core ERP project.

Key Capabilities:

KPI Dashboards

Trend Analysis

Cross Business Insights

Fully Reconciled & Validated Data

Process Automation

Forensic Analysis

Why PrecisionPoint

We are leaders in advanced reporting and business intelligence for the Microsoft Dynamics 365 platforms.

Our solutions have been proven across many industry sectors and against a vast number of disparate data sets. This enables us to provide a 'ready-made' solution that reduces risk and accelerates time to value.

We remove the complexity, provide you with contextual access to your data and enable you to deliver the intelligence that your business needs to thrive.

PrecisionPoint has been developed to work not only with current and legacy Dynamics ERP systems, but also with Cloud (Azure), on-premise and hybrid platforms. From an on-premise single server implementation to a multi tenanted, multi instance Azure deployment, we have a solution that will fit in with your organisation.

We act as a data source to any industry leading front-end BI tool, especially PowerBI and Excel. As a Microsoft certified partner, each component of our solution is built using Microsoft technology.

"Quick to implement and we can now rapidly produce useful reports that we know are accurate."

Finance Manager, Royal Horticultural Society
